

# TIMBER PRODUCT RANGE 2026

# STRAPPING

Designed for demanding timber applications, our strapping solutions deliver dependable strength and secure load stability. Helping reduce load movement, improve safety, and protect products during storage and transport, they support stronger and more efficient load securing operations.

---

## COMPOSITE POLYESTER

---

Mega Fortris Composite Polyester Strap is a strong safe alternative to steel banding, as there are no sharp edges making it much safer and easier to handle. We offer a range of widths from 19mm to 32mm.

## EXTRUDED POLYESTER (PET)

---

Extruded Polyester Strapping (PET) offers a high tensile, high retained tension strap in a variety of widths and thicknesses. PET is generally manufactured green in colour, but other colours and customised printing are available for larger volumes.

## WOVEN POLYESTER STRAPPING

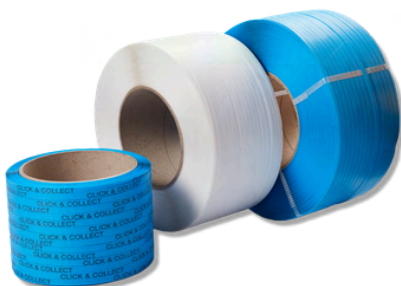

---

Our Woven Polyester Strapping, engineered from high tenacity polyester yarn to deliver exceptional strength and reliability for your packaging and securing needs. This advanced strapping solution provides a safe, user-friendly alternative to traditional steel banding.

## HOT MELT POLYESTER

---

The main component of our Hot Melt Polyester Strapping is high tenacity polyester yarn, which is bonded with hot melt glue to give it a strong safe alternative to steel banding, and as there are no sharp edges, it is much easier to handle.

## POLYPROPYLENE

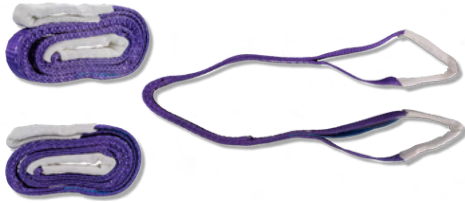

---

Polypropylene Strapping is a lightweight cost-effective solution for securing lightweight loads. Available in widths from 5-16mm and various thicknesses.

# LIFTING SLINGS

Designed for demanding lifting applications, our lifting slings provide reliable strength, durability, and secure load handling across timber operations. Supporting safer lifting and improved operational efficiency, they help ensure stability and control throughout handling and transport.

---

## DUPLEX FLAT WEB MULTI-USE

---

Duplex Flat Web Slings offer the most cost effective and durable flat web sling for general purpose lifting. The double ply webbing provides the most economic strength to width ratio. Each eye is finished in a becket format with polyester reinforcing to protect the eye.

## LOOPED END

---

The reliable solution for your lifting needs. These slings provide safety, strength, and efficiency on every job. Each sling features a distinctive white colour for quick identification, manufactured in accordance with EN1492-1 standards for quality and safety compliance.

## ROUND ENDLESS MULTI-USE

---

The Round Endless Multi-Use Lifting Sling is designed for strength and flexibility, this sling features a seamless circular construction that evenly distributes load pressure, reducing wear and tear on both the sling and the lifted item.

## RATCHET STRAPS

---

Our range of ratchet straps are designed for secure reliable load restraint. Available in a variety of lengths and strength ratings, these straps can be supplied with claw hooks at each end or in an endless format to suit your needs. The range includes maximum load limits from 4,000 - 10,000kg.

The ratchet mechanism allows for quick and efficient one-handed tensioning. As a result, users can tighten loads securely with minimal effort.

We offer customer printing and a wide selection of colours for bulk ordered. Each strap is manufactured to comply with EN12195-2 standards, ensuring maximum safety and performance.

# ACCESSORIES

Our accessories are designed to support safer, stronger, and more efficient load securing across timber operations. Helping improve load protection, stability, and handling efficiency, these solutions reduce the risk of damage during storage and transit while supporting smooth supply chain movement.

## PALLET WRAP

A strong plastic film available in different thicknesses that is easily stretched around items. The elastic recovery ensures it retains tension which is perfect for keeping pallets stable.

## EDGE BOARDS

Mega Fortris Edge Boards stabilise loads and prevent corner damage to pallets. Available in various sizes and thicknesses, including custom lengths up to 6 metres. Each board is made from 100% recycled materials and is fully recyclable.

## GALVANISED STEEL BUCKLE

Our Galvanised Steel Buckles are designed to give optimum joint efficiency and system strength to be used in conjunction with our Composite Polyester Strapping.

## EDGE PROTECTORS

Edge Protectors provide a simple and effective way to protect the edges of cartons, pallets, and strapped goods during storage and transport. They sit between the strap and the load, helping spread the pressure evenly and reduces the risk of crushing, denting, or strap marks.

## PHOSPHATE BUCKLES

Our Phosphate Buckles undergo a sherardising process which gives them a slightly rougher surface finish for maximum joint efficiency and system strength when used in conjunction with Mega Fortris Hot Melt and Woven Polyester Strapping.

## MOBILE STRAP DISPENSER

The Mega Fortris Mobile Strap Dispenser consists of rugged tubular frame with 2 metal flanges to retain the coil strap, and a brake mechanism to prevent any strap overrun. The dispensers are available for: Composite Polyester Strapping, Woven Polyester Strapping, Hot Melt Polyester Strapping, Extruded Polyester Strapping (PET), Steel Strapping, and Polypropylene Strapping (PP).
